

Product Guide

StarterPack

What is it?

A required add-on item for datajar.mobi customers with a very low device quantity.

The cost benefits of datajar.mobi can be seen more clearly when customers have a medium to large Apple estate. Nevertheless, some customers with few devices may still be keen to make use of the many other benefits of datajar.mobi. This add-on item makes this possible.

How does it work?

This is an annually renewable item that can be purchased as a datajar.mobi add-on only.

If the customer's Apple estate grows, meaning it exceeds the minimum quantity, the StarterPack will automatically be removed at their next renewal.

If a customer is only a few below the minimum device quantity, it may be more cost effective to purchase extra licences up to the minimum quantity rather than a StarterPack.

Requirements:

- An active datajar.mobi subscription

Who is the StarterPack for?

Customers who are very interested in datajar.mobi, yet have fewer than: 25 macOS or 50 iOS devices (for commercial) 50 macOS or 100 iOS devices (for education).

As an example, if a customer has both device types, the sum of these can take them above the minimum quantity. Two iOS devices = one macOS device. For example, a commercial customer with 12 macOS devices and 28 iOS devices would be above minimum quantity and would not require a StarterPack (12 macOS = equivalent to 24 iOS devices, 24 iOS + 28 iOS = 52 iOS, greater than the minimum quantity of 50 iOS).
